METHODE DU GRAND PAPA

NOUVEAU COURS ÉLÉMENTAIRE

DE DESSIN PRATIÇUE

D'ORNEMENT

PAR

J. CAROT,

Directeur d'une Ecole municipale de Dessin de la ville de Paris,

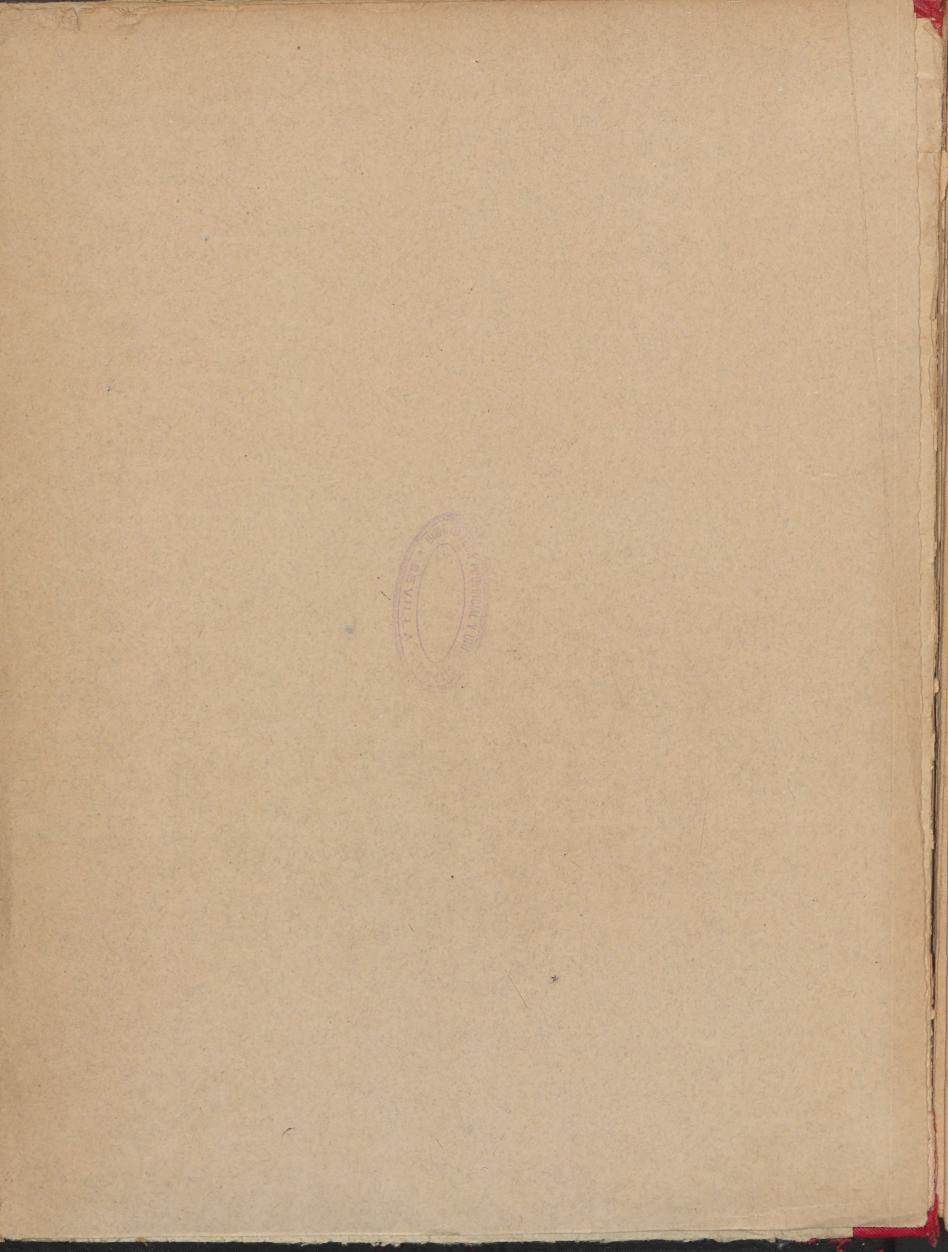

avec texteraisonne par Grand-Papa

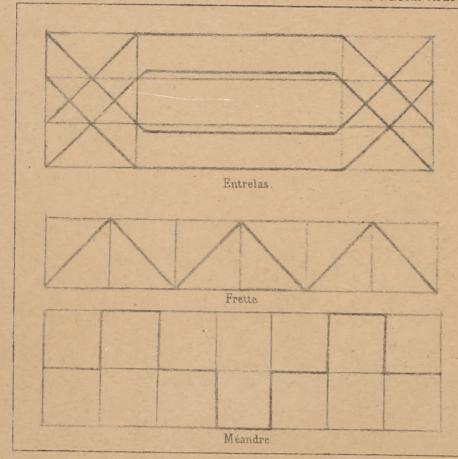

PARIS

MONROCO Free Editeurs Imprimeurs rue Suger 3

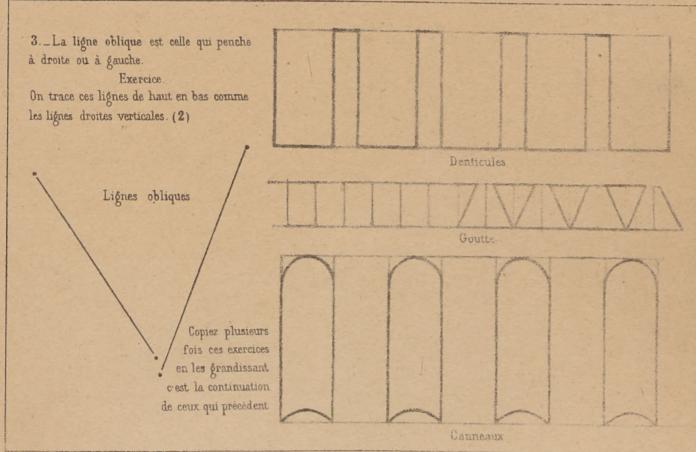

Marson spéciale pour les modèles de dessin artistique industriel & professionnel

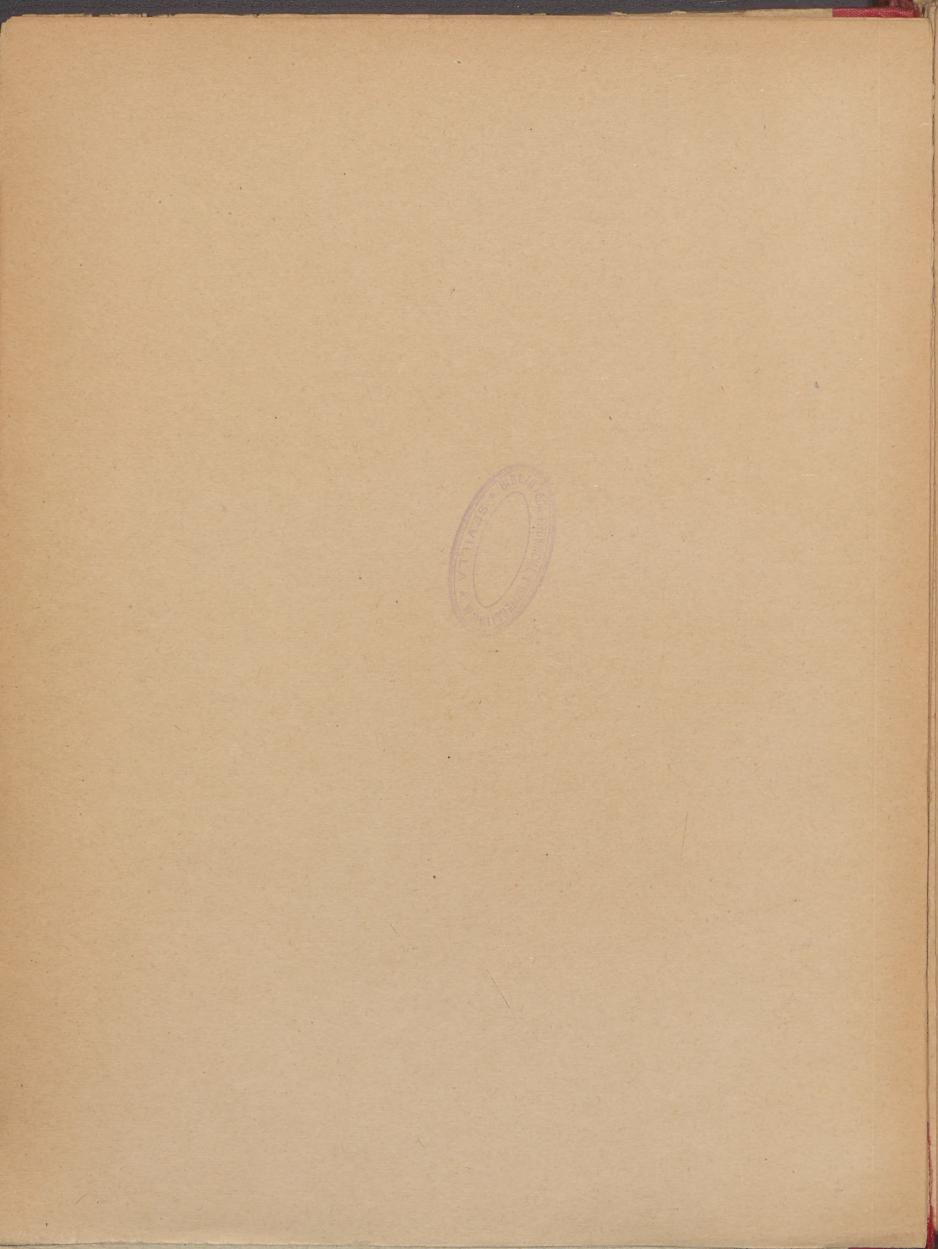

Il est tellement important de s'exercer la main et l'œil à tracer toutes sortes de lignes droites que nous croyons utile de vous engager à répéter encore sur une grande feuille de papier, le tracé de toutes ces lignes. — Vous aurez bientôt à vous servir de ces tracés pour dessiner des motifs intéressants.

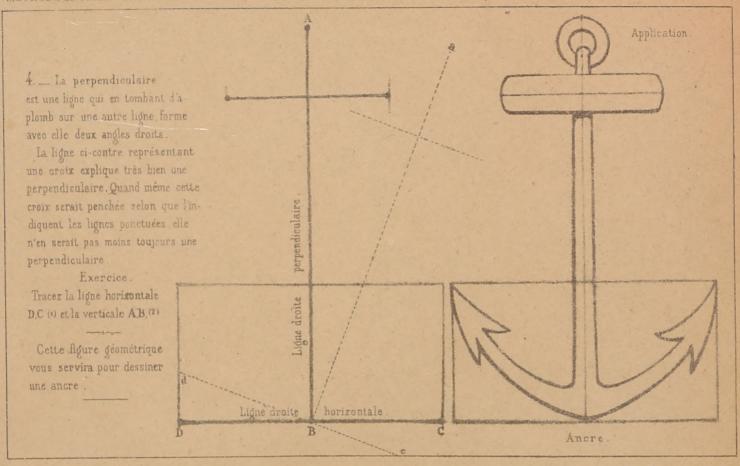

Occupez-vous pour le moment à diviser une ligne en plusieurs parties à faire des lignes parallèles, des lignes croisées, etc. — Ces simples exercices répétés bien des fois et dans plusieurs grandeurs, vous feront faire des progrès rapides.

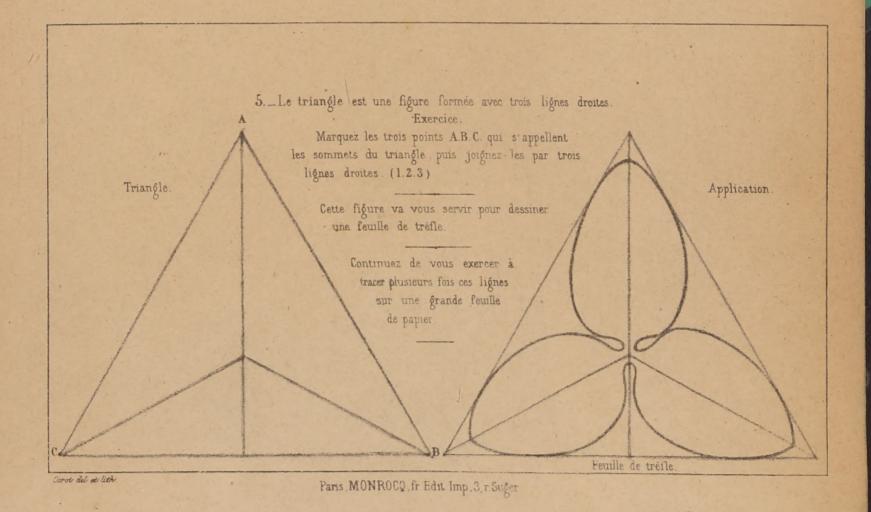

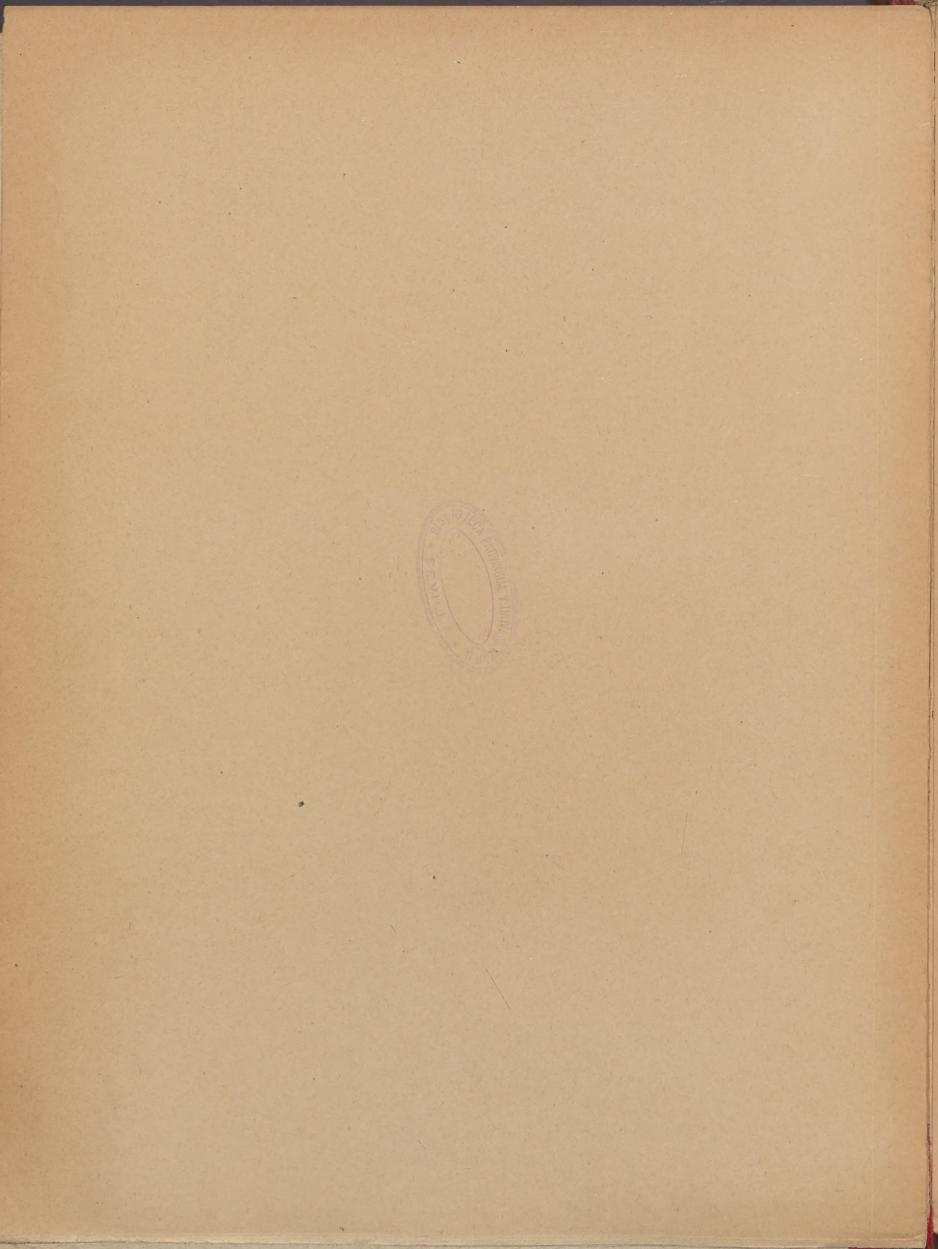

J Carot del et och

Carot del et lith.

Paris MONROCQ, fr. Edit Imp, 3, r. Suger

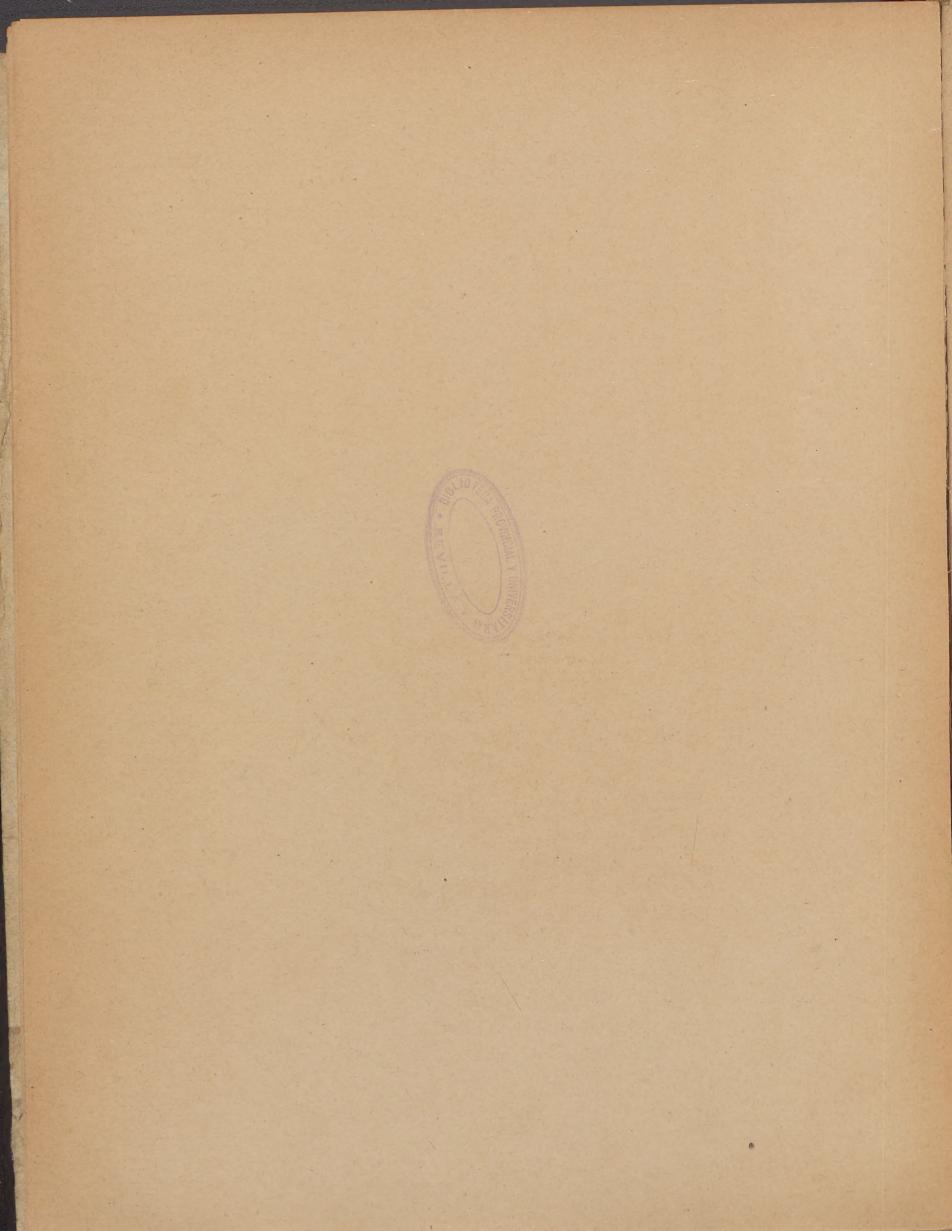

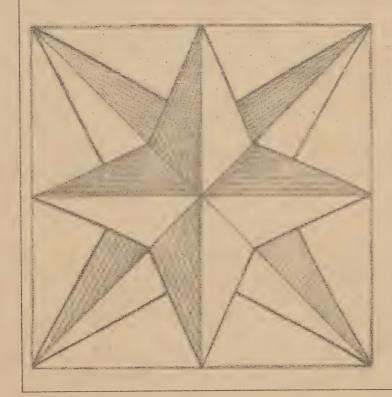

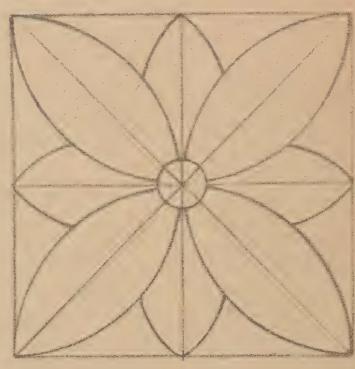

Marot dei Se lith.

Paris, MONROCQ fr. Edit Imp. 3, rue Suger

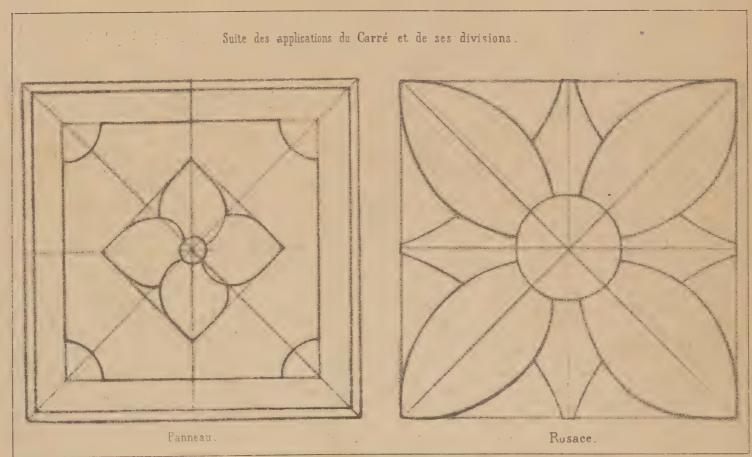

Applications des exercices qui précèdent: Rien de plus simple si vous avez bien étudié les figures que nous venons de voir.

Etoile.

Etoile.

J. Carot del. & lith.

Paris, Monrocq fres éditrs imprs, 3, r. Suger.

8. Le rectangle est une figure formée de 4 lignes droites perpendiculaires entre elles il diffère du carré par ce que deux de ses côtés opposés sont plus petits que les deux autres

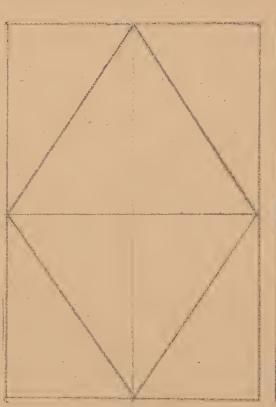

9. Le losange est la figure inscrite dans un rectangle.

Exercice.

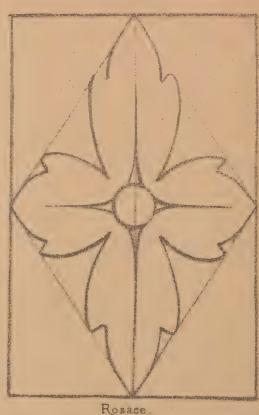

Le tracé du rectangle est pareil a celui du carre 6.

Ces figures sont constamment employées dans le dessin d'ornement.

Continuez ces exercices comme les précédents toujours en les grandissants.

nosace

Application.

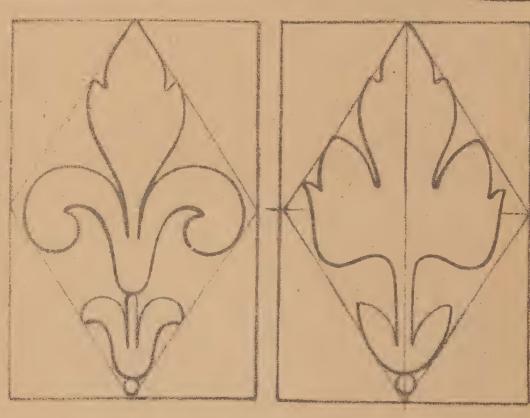

Suite des applications du rectangle et du losange.

Nous ne cesserons de vous répèter ceci :

Exercez-vous la main et l'œil au tracé de toutes ces figures géométriques.

Dessinez-les dans toutes les grandeurs

C'est la vrai route pour arriver à bien faire.

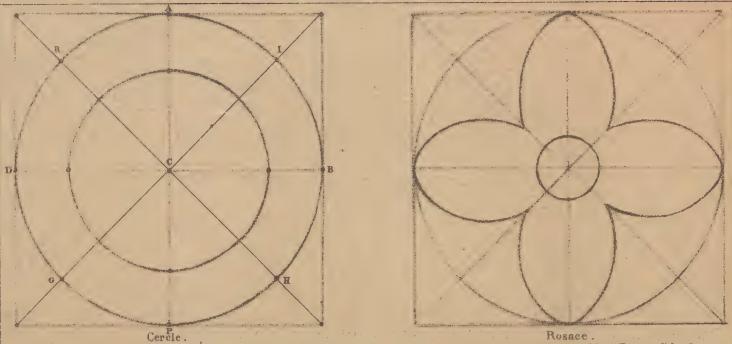

Fleurons

J. Carot del. & bish

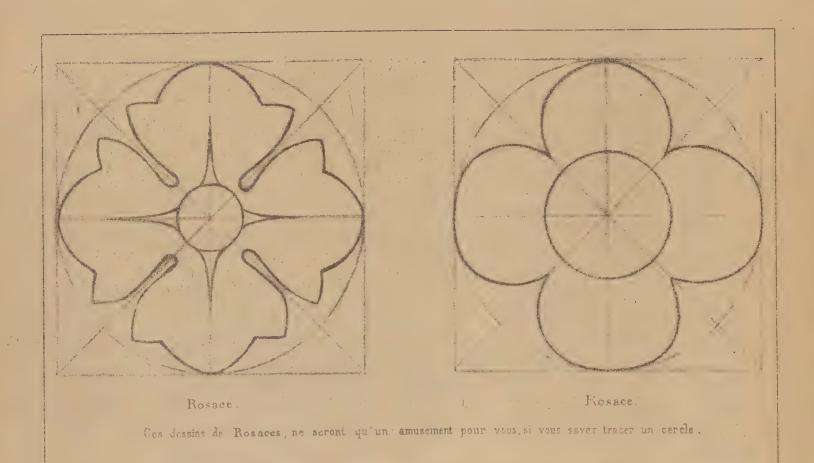

Paris, MONROCQ fr. Edit. Imp. 3, rue Suger.

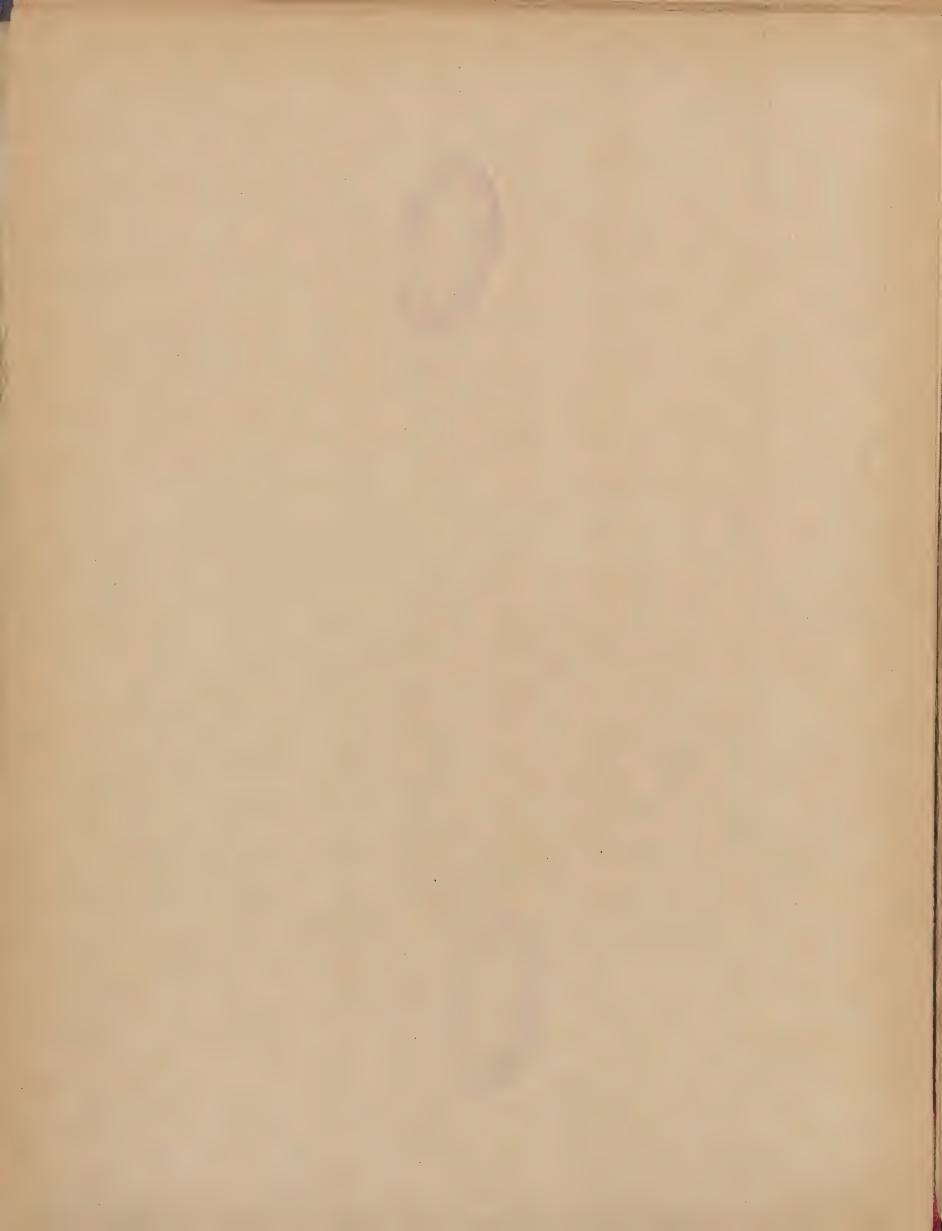

10. Le Cercle est une figure parfaitement ronde dont l'exécution demande une grande attention. Voici comment on procède: Tracez d'abord un carré (6) puis deux diagonales (7) le point de rencontre C de ces diagonales est le centre du cercle. Divisez ce même carré en 4 parties égales par les lignes A,P & D,B; portez la distance C,B, de C en I, de C en R & T. Tous ces points I,A,R,D,G,P,H,B, seront à égale distance du centre C et ils indiquent par où la circonférence doit passer. Tracez maintenant des courbes B,I,IA & a. s. si les courbes sont régulières vous aurez un corcle parfait.

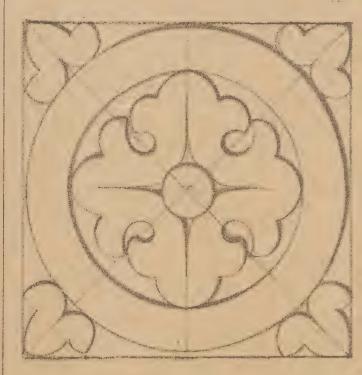

Nous n'osons pas vous dire que vous réussirez du premier coup, mais ne vous découragez pas, employez ce procédé pour tracer des cercles de toutes les grandeurs et vous finirez par obtenir un bon résultat. Vous serez récompensé par la facilité que vous aurez ensuite pour exécuter sans peine tous les dessins que vous voudrez faire.

Ove Renaissance.

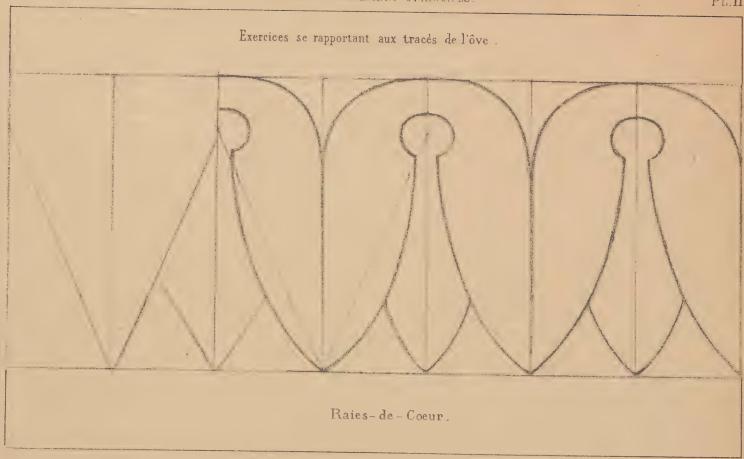

11. L'ôve est une figure qui a presque la forme d'un œuf, et dont l'emploi est très fréquent dans l'ornementation. On obtient son tracé par l'emploi d'un rectangle (8) et on procède à peu près comme pour le cercle (10). La forme de l'ôve n'a rien de fixe: tantôt les deux bouts sont pointus, tantôt un bout est plus gros que l'autre. C'est par le sentiment, le goût, le coup d'œil et la main qu'on peut trouver le contour de ces formes extrêmement gracieuses. Exercez-vous à tracer toutes sortes d'ôves, faites-en de toutes les grandeurs jusqu'à ce que vous ayez obtenu un bon résultat.

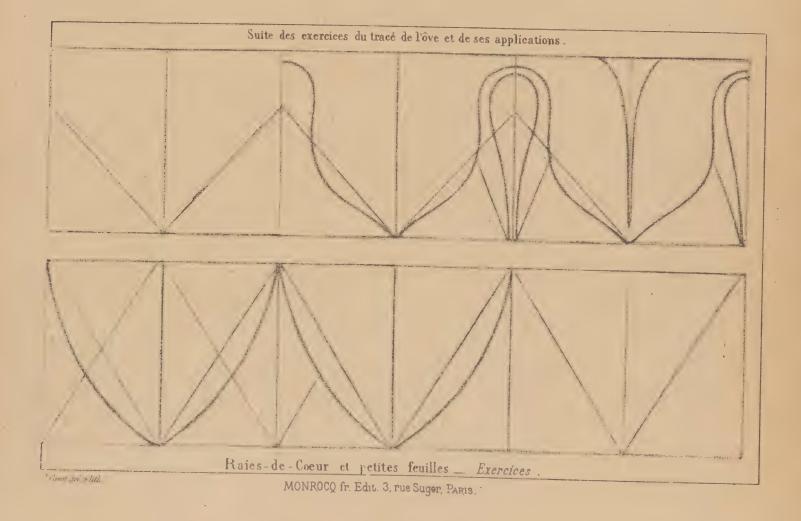

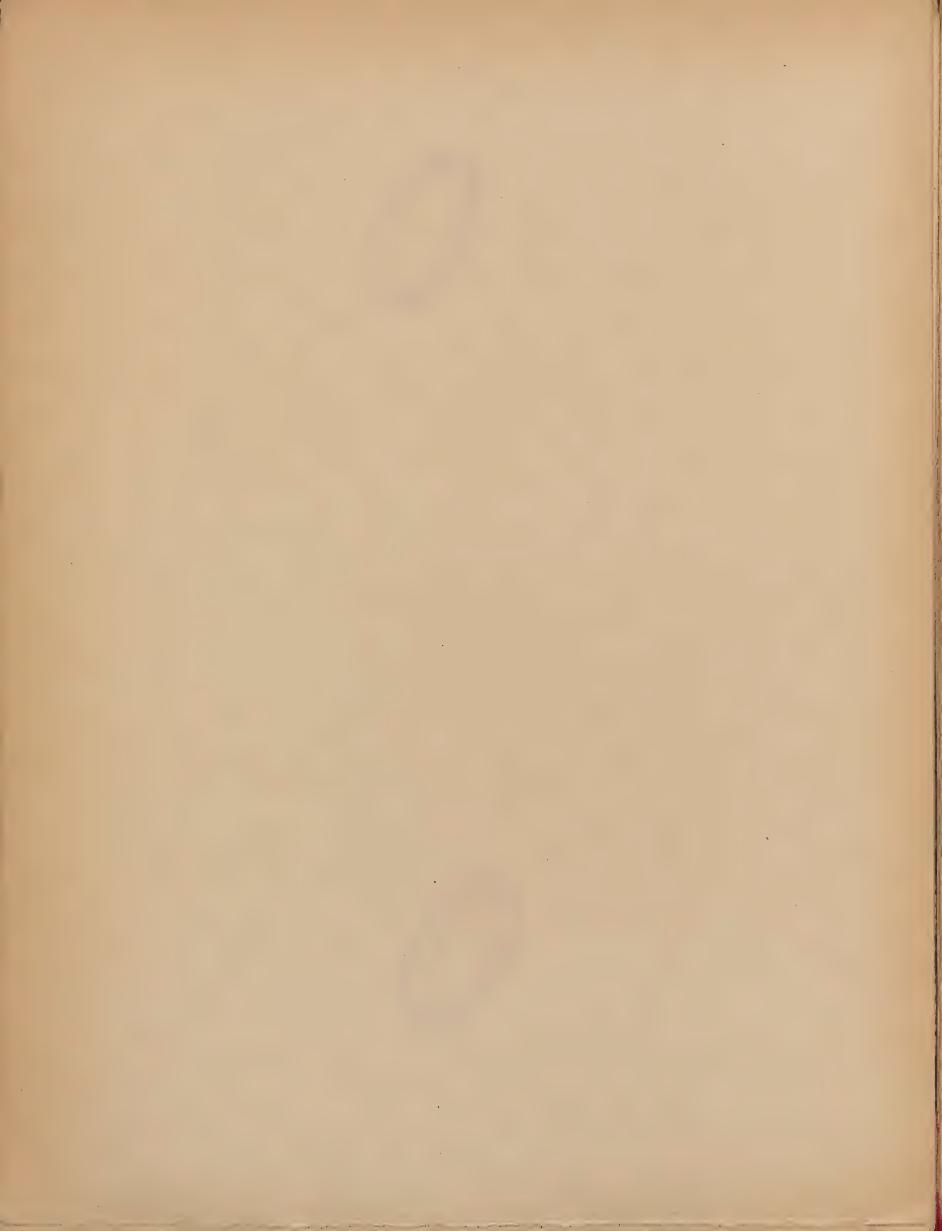

Ôve Grecque.

Ces deux fragments de dessins sont des applications de l'ôve; ils appartiennent à des moulures de différents styles. Exercez-vous à les reproduire plusieurs fois en les grandissant.

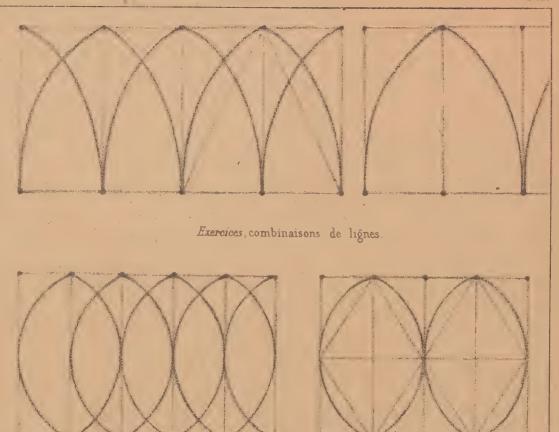

Cette planche termine les exercices des tracés géométriques, si vous avez bien étudié les planches qui précèdent celle-ci ne vous présentera aucune difficulté, ce sont toujours des exercices à répéter plusieurs fois en les grandissant.

Nous avons voulu avec cette dernière planche vous démontrer que la géométrie à main levée est le meilleur moyen d'apprendre à dessiner.

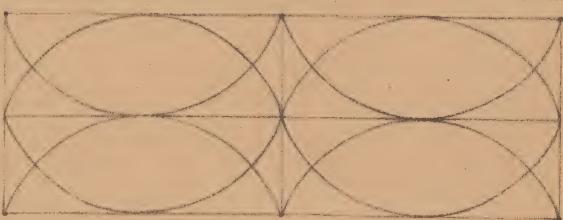

En examinant avec attention ces fragments de dessins représentant des balcons, vous recommaîtrez que ce n'est autre chose que des combinaisons de lignes géométriques: lignes droites, Carrés, Cercles, etc. C'est là, la conclusion ou nous voulions arriver

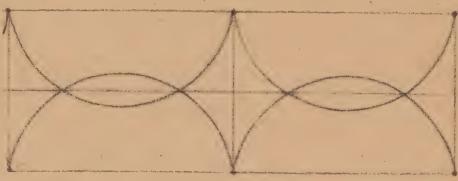

si vous nous avez compris, notre but est atteint.

Tous les dessins qui suivent sont des applications de notre méthode et ne vous offriront aucune difficulté.

Courage donc jeunes amis, le succès récompensera vos en .

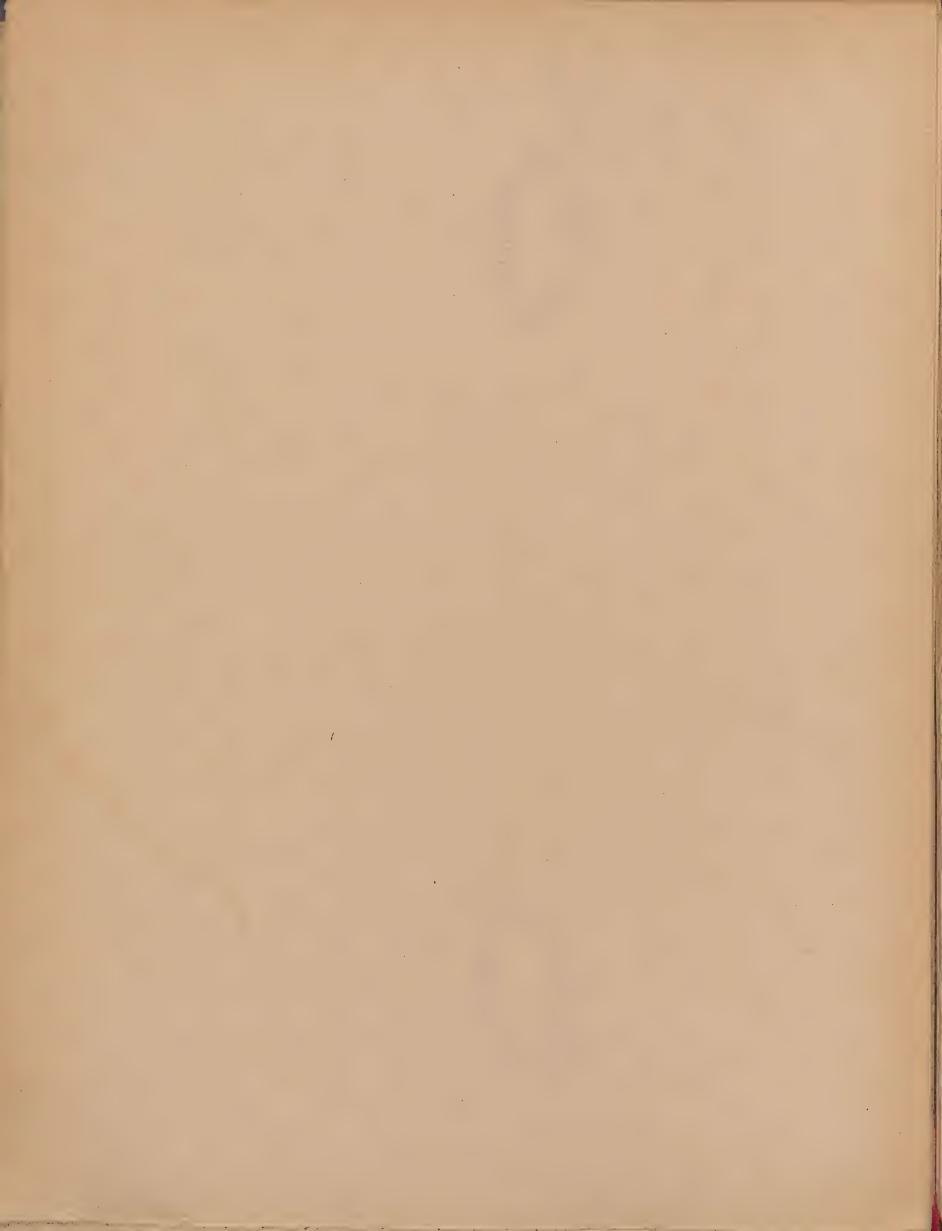

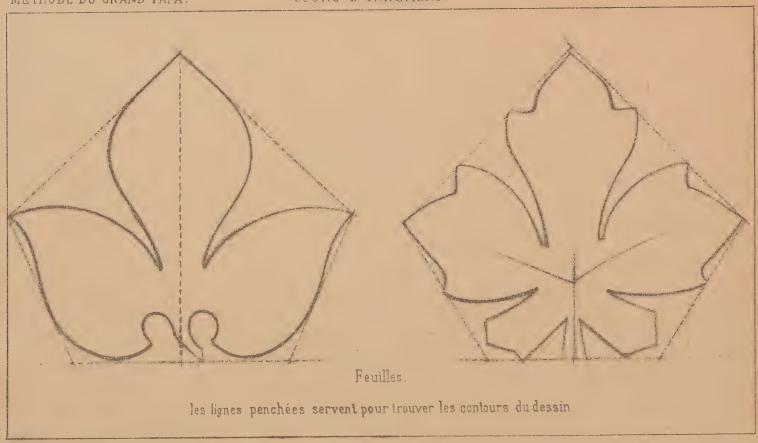

Exercices; combinaisons de lignes.
